

Hexagon company myVR Software (Xalt | Visualization) initiates collaboration with XMReality

Hexagon company myVR Software and XMReality are initiating a collaboration to integrate XMReality's Remote Guidance solution into Hexagon's Xalt | Visualization platform for XR solutions.

The shared solution means that developers using myVR Software's Xalt | Visualization XR platform will easily be able to build solutions that also include XMReality's Remote Guidance functions. Together, this enables very powerful solutions that combine AR-based automatic instructions with remote access to expertise.

"XMReality's remote guidance solutions help strengthen our technology platform, especially given that Xalt | Visualization's platform is used in many of Hexagon's products. In this way, we can more easily bring greater added value to the digital transformation processes of Hexagon's customers", says Rune Fjellvang, CEO myVR Software and evangelist for Hexagon Xalt.

"We see an exciting opportunity to integrate our service into myVR Software's solution, with XMReality contributing to a strengthened overall offering for myVR Software. We look forward to this initial shared project that will hopefully lay the foundations for a successful long-term collaboration", says Jörgen Rimmelg, CEO XMReality.

About XMReality

XMReality AB (publ) develops and sells solutions that revolutionizes knowledge sharing through augmented reality (AR). The company is a market leader in remote guidance, which uses AR to guide onsite staff and enable them to resolve or prevent problems. XMReality's customers are mainly global industrial companies, including Bosch Rexroth, ABB, Siemens Industrial Turbomachinery, Electrolux and Bombardier. XMReality is headquartered in Linköping, Sweden, and is listed on Nasdaq First North (ticker: XMR). Further information is available under <http://www.xmreality.com>.

About XMReality Remote Guidance™

XMReality Remote Guidance is an AR-enabled knowledge sharing tool that lets you communicate with gestures, speech, chat and pointers with someone at a completely different place. It includes:

- A unique hands-overlay technology that lets you guide someone else's hands – as if you were there
- A web portal to manage teams and users, and to measure usage
- Integration through client-side API's (Application Programming Interfaces)
